SECURITY POINTS

StudentPay AI · Cross-border & Student Finance Assistant

1. **Password Hashing** — Store hashed passwords, not plain text.
2. **Login Protection** — Limit repeated failed login attempts.
3. **Input Validation** — Validate all user inputs.
4. **SQL Injection Protection** — Use parameterized SQL queries.
5. **Data Privacy** — Protect users' personal and financial information.
6. **User Access Control** — Users can access only their own data.
7. **API Key Protection** — Never expose API keys or passwords in source code.
8. **AI Prompt-Injection Protection** — Prevent malicious instructions from manipulating the AI.
9. **Human Approval** — Require user confirmation before financial actions.
10. **Audit Logs** — Record important security events without logging sensitive data.
11. **Encryption** — Use HTTPS and encryption to protect data.
12. **Fraud and Risk Checks** — Validate suspicious or unusual transactions.
13. **Error Handling** — Avoid exposing sensitive system details in error messages.
14. **Testing** — Test authentication, permissions, input validation, and security risks.

Security checklist for the FinTechathon project.
